

YOUR LAND. YOUR FUTURE.

For The Life of Your Land

Industrial development? Land Development? Resource Development?

In an often changing landscape, it is challenging to know where to turn to ensure that your community's interests are met and to clarify a vision for now and for future generations.

Environmental Impact Assessments (EIA) are critical in providing you with the facts, evidence, and basic data that will give you the environmental information to clearly detail your community's position, and protect your interests.

Ecological evaluations (including vegetation, wildlife, biodiversity and landscape ecology) are essential to understanding and dealing with issues – for today and tomorrow.

Environmental Science and Sustainable Growth

MSES provides the expert advice – the in depth reviews and guidance – throughout the Environmental Impact Assessment process. Working closely with you, we will ensure that you have the powerful tools to support your negotiation process and to allow panels, review boards, and your community's legal teams to make clear decisions about the development of your traditional lands.

Whenever you need us, we can respond with a complete, integrated set of science services

- Full ecological evaluations
 - Field survey designs, data analysis, and mapping
 - Project design and control
 - Support in public hearings
 - Community consultation and public presentation
- And more**

You can select your requirements and we will meet your needs – on time and on budget.

Experienced, Professional – and Successful

With experience locally, and around the globe, MSES offers an association of skilled scientists to help build scientifically sound solutions. Essentially, we tailor our services to your particular needs and budgets, and to meet your specific vision of resource use.
